SW 850:
Clinical Social Work: Individuals & Dyads
Study Questions - Session 6
DUE: 10/07/02

Study question answers must be typed and single-spaced. Where the question calls for a list, each item on the list should be on its own line. Answers should be BRIEF.

Text: Ellis

1. There may be some disadvantages to helping low frustration tolerance (LFT) clients to see how impractical their irrational beliefs are. What are they?

2. What is the "REBT quibble" that distinguishes Rogers' "unconditional positive regard" from "unconditional self-acceptance?"

Text: Reserve – Follette, Ruzek, & Abueg (Meadows & Foa)

1. Occasionally, clients participating in imaginal exposure therapy experience extended flashbacks, which is detrimental to the effectiveness of treatment. What modifications to exposure treatment do the authors suggest?

Text: Reserve – Follette, Ruzek, & Abueg (Wagner & Linehan)

1. What is a "chain analysis"?

Text: Reserve – Follette, Ruzek, & Abueg (O'Donohue, Fanetti, & Elliot)

1. The authors gave three reasons for including a prevention component in sexual abuse treatment packages. What were they?

Text: Reserve – O'Donohue & Syzmanski

1. The authors cited a study by Chapman & Chapman on how clinicians "discover" relationships. What were the findings in this study?
