Text: *Grinnell*

1. The National Commission for Protection of Human Research Subjects has identified three criteria for adequate informed consent.
   
   What are they?

2. Grinnell has identified four myths about quantitative research approaches. Please list them and cite counter-examples for the first two.

3. Generalizability has two aspects. Please list and define them.

Lecture

4. Based upon the evidence presented here, tell whether the conclusion to the following argument is valid and give your reasons.

   “Smoking marijuana leads to heroin use. A report by the U.S. Commissioner of Narcotics on a study of 2,213 narcotic addicts in the Lexington Federal Hospital found that 70.4% smoked marijuana before taking heroin.”
