**TC 462c: Intro to E-Commerce**  
Dept. of Telecommunication, Information Studies, and Media

There are two types of assignments in TC 462c. First, there is a group project required of all students that will be presented to the class near the end of the semester. Each project will have an accompanying written rationale. More information about the project is provided below. This project/paper is worth 25% of your overall class grade.

The second set of assignments are lab exercises that demonstrate proficiency with topics covered in class. These will be given during lab sections and posted here. These exercises will collectively be worth 25% of your overall class grade.

### Group Project Requirements

In general, groups shall consist of 2 or 3 people. We will work on these projects throughout the semester, and form groups early. Class time will be made available to help with this process. Groups will complete an e-commerce simulation that demonstrates principles discussed in class and integrates techniques from lab. Each group project will be presented formally in class. The web site and presentation must be supplemented with a brief page or set of pages linked to an "about this site" button on the home page that provides a rationale for the features and design of the site.

### Project Planning and Target Dates (To be provided)

### Lab Exercises (To be posted)
