Looking up on a peaceful afternoon. For this photo I did a lot of things from the original to make the enhanced version of this picture. First I started off by cropping out the photo then after that I rotated it. After I had completed those steps I changed the color to black and white to give it more of an abstract look to it. This picture turned fairly well.
Brighter than Flammable Gas. For these pictures I didn't do very much to the original to get this edited one. First I cropped the image down trying to put it in the rule of third aspect. After that I used the color burn tool on the flammable sign which produced that brighter red color in addition to that it also made the brackets that hold this sign onto the truck way brighter.
Field of Studies.
