1. Select File and then New.
   • The new image should be about 8 inches in width by 4 inches in height (really too big to use on a web page, but better to start big and then crop/resize if need be).
   • The resolution should be, of course, 72 pixels/inch.
   • The mode should be set at RGB color.
   • The “Contents” should be “White.”

2. Using the Color Picker, select a foreground color and fill in the image with that color.

3. Using the Color Picker, select a foreground color for your text.

4. Click on the Text button in the tool pallette.

   The options bar at the top of the Photoshop window should change.
   You can see that there are a variety of options for the Text tool. For this activity, do the following:
   
<table>
<thead>
<tr>
<th>T</th>
<th>T</th>
<th>T</th>
<th>T</th>
<th>Arial</th>
<th>Bold</th>
<th>24 pt</th>
<th>Strong</th>
</tr>
</thead>
</table>

   a. Choose the font face you wish to use.
   b. Choose the font size you wish to use.

5. Click in your image and type your name.

6. Once you are satisfied with the text, make sure the Text tool is selected in the tool palette and right-click once on the image.

   Select “Warp Text...” from the menu that appears.
   
   a. Select one of the Warp Text styles from the Style feature. You should be able to see a preview of your image on screen.
   b. Once you have selected a Warp Text style, play with the Bend and Distortion options.
   c. Once you are satisfied with the style, bend, and distortion you want to apply to your image, click on “OK.”
7. Next, select **Window** and make sure that “Hide Layers” is listed. (If “Show Layers” is listed, drag down and let go on “Show Layers.”)

8. Make sure the Text tool is selected in the tool palette.
   a. **Right-click** once on the Text layer in the Layers box.
   b. Select **Blending Options** from the menu that appears.
   c. Experiment with different text-manipulation options in the “Styles” menu within the “Blending Options” box.
   
   To select a style and apply it to your image, click in the box to the left of the style. You should be able to preview the changes to the text on screen.
   d. Experiment with different “General Blending” and “Advanced Blending” options.
   e. Once you like the way the text looks, click on “OK” to set the changes. You should be returned to your image.

9. Crop the image to a reasonable size—don’t leave too much “dead space” around your name.

   Your image will look something like the image here.

10. Save the image.

   Your next—and final—step for module 7 is to create a new, blank web page and to embed all of the images in that new page.

   Once you’ve created the web page, embedded your images, double-checked to make sure your web page is viewable and all the images show up, upload your module 7 page URL to ANGEL.
