Jacqueline Lee Late Blight Susceptible

A Yellow-Flesh Tablestock Variety with Late Blight Resistance

• Jacqueline Lee tubers have a bright and smooth skin and a creamy yellow flesh, with an attractive tuber type typical of many European varieties.

• The plants yield a heavy set of medium-sized, uniform tubers.

• Jacqueline Lee has shown strong foliar resistance to late blight, with a medium-late maturity.

• They can be used for boiling, baking, mashing, and microwave cooking and have excellent taste quality similar to Yukon Gold.
