1. OF WORDS OF LANGUAGE

John Locke

35

THE NATURE OF LANGUAGE

Words are the signs of objects in things, signs that are used to convey thought and expression. They are the elements of language and are used to form sentences. Without words, communication would be impossible. Language is the means by which we convey our thoughts and ideas to others. It is a system of symbols that represent concepts and ideas. Words are the building blocks of language, and they are used to construct sentences. Each word has a meaning, and the combination of words creates a new meaning. Language is a powerful tool that allows us to express ourselves and communicate with others. It is essential for the development of human society and civilization.
THE NATURE OF LANGUAGE

III. GENERAL TERMS

THE PHILOSOPHY OF LANGUAGE

How general words come to be made is—

In the case of the person to whom we speak, the sound of the words is the thing which is most likely to cause a person to do as we wish.

Not only is the word the thing which is most likely to cause a person to act, but the sound of the word is also the thing which is most likely to cause a person to think.

This is because the sound of the word is the thing which is most likely to cause a person to act, and the thought that goes with the action is the thing which is most likely to cause a person to think.

The thought, then, is the primary thing which is most likely to cause a person to think.

It is, therefore, the thought which is most likely to cause a person to think.
